Shell Help:

log                                     'log.info(<msg>)': Write a custom
info/warn/error/fatal/debug message to the log file
info/getPath()': Gets a path to the current log file

use                                     Set current database
show                                     'show databases'/'show dbs': Print a list of all
available databases

collections for current database          'show collections'/'show tables': Print a list of all

database                                'show profile': Prints system.profile information
database                                'show users': Print a list of all users for current
database                                'show roles': Print a list of all roles for current
if name is not set uses 'global'          'show log <name>': Display log for current connection,
                                         'show logs': Print all logger names.
                                         Quit the MongoDB shell with exit()/exit()
                                         Quit the MongoDB shell with quit/quit()
                                         Create a new connection and return the Mongo object.

Usage: new Mongo(URI, options [optional])
       connect
object. Usage: connect(URI, username [optional], password [optional])
       it
iterate
       version
       load
shell environment
       enableTelemetry
the mongosh CLI
       disableTelemetry
the mongosh CLI
       passwordPrompt
       sleep
       print
       printjson
       convertShardKeyToHashed
hashing function as a hashed index.
       cls
       isInteractive
interactive mode

                                         Shell version
                                         Loads and runs a JavaScript file into the current
                                         Enables collection of anonymous usage data to improve
                                         Disables collection of anonymous usage data to improve
                                         Prompts the user for a password
                                         Sleep for the specified number of milliseconds
                                         Prints the contents of an object to the output
                                         Alias for print()
                                         Returns the hashed value for the input using the same
                                         Clears the screen like console.clear()
                                         Returns whether the shell will enter or has entered
```
